### I. Mission Statement

#### The College Mission

The mission of Alpena Community College is to create a culture of educational excellence and service to the community.

#### The College Goals

1. **Campus/Culture**
   - Offer a welcoming, safe, and adaptable culture that inspires diversity.

2. **Learning/Education**
   - Motivate continuous exploration of diverse opportunities and knowledge acquisition through a flexible learning environment.

3. **Community**
   - Stimulate community collaboration, which fosters comprehensive economic, cultural, and community development.

4. **Value**
   - Exercise sustainable value that supports career pathways and fiscal responsibility.

#### The College Vision

To be recognized in our local and global communities as the premier resource and first choice for exceptional, affordable, and innovative education.
The College Values

• We demonstrate **accountability** to all our stakeholders, students, staff, business partners, industry alliances, and taxpayers.
• We act with **integrity**, placing fairness and honesty at the center of all our actions.
• We aspire to **excellence** in all our endeavors.
• We show **respect** for diversity, individual contributions, and educational partnerships.

II. Instructional Programming

a. Existing Academic Programs

ACC offers the Associate in Arts and Associate in Science degrees for students who plan to transfer to a four-year institution after two years of study.

**Associate in Arts Concentrations**

- Anthropology
- Business Information Systems
- Computer Information Systems
- Criminal Justice
- Economics
- Education, Elementary
- Education, Secondary
- Education, Vocational
- English
- Fine Arts
- Geography
- History
- Liberal Arts
- Political Science
- Pre-Law
- Psychology
- Social Work
- Sociology

**Associate in Science Concentrations**

- Biology
- Chemistry
- Computer Science
- General Sciences
- Mathematics
- Natural Sciences
- Physics
- Pre-Construction Management
- Pre-Dental
- Pre-Engineering
- Pre-Fisheries and Wildlife
- Pre-Medical Technology
- Pre-Medicine
- Pre-Occupational Therapy
- Pre-Pharmacy
- Pre-Physical Therapy
- Pre-Radiology Technology
- Pre-Veterinary
- Psychology

The Associate of Applied Science degree marks the progress of students seeking employment after graduation from a variety of two-year programs. Current majors for the AAS degree include the following.
• Accounting
• Auto Service and Repair
• Business Information Systems
• Business Management
• CADD Technology
• CAD/CAM Technology (Machining Option and Welding Option)
• Concrete Technology
• Corrections
• Customer Energy Service
• Electrical Maintenance Technician
• Industrial Sales
• Law Enforcement
• Manufacturing Technology
• Marketing
• Medical Assistant
• Medical Coder and Biller
• Millwright Technician
• Network Administration
• Nursing
• Small Business Management
• Utility Technician

The Certificate award marks the progress of students seeking employment after graduation from a variety of one-year programs. Certificate awards are currently made in these fields.

• Apprentice – Electrical
• Apprentice – Millwright
• Auto Service and Repair
• Business Information Systems
• CAD/CAM, Advanced
• Construction Technology – Green Building
• Corrections Officer
• Customer Energy Service
• Industrial Technology
• Manufacturing Technology
• Network Administration
• Licensed Practical Nursing
• Small Business Management
• Utility Technician
• Welding Fabrication

b. Unique Characteristics

The Concrete Technology AAS program at ACC is one of only two in the nation. It operates out of the World Center for Concrete Technology on the ACC Main Campus alongside incumbent worker training and research/testing performed as a service to the concrete industry.

Since 2015-16 ACC has ranked 1st or 2nd among Michigan’s 28 community colleges in Student Success Rates, according to data aggregated by CEPI (Center for Educational Performance and Information), Michigan’s repository of post-secondary educational data:

Alpena Community College Five-Year Capital Outlay Plan 2024-28, pg. 4

ACC currently administers the following federal grants: Trio Talent Search; Title III Part A, Strengthening Institutions Program grant; HEERF Coronavirus Relief; USDA Distance Learning and Telemedicine grant; and is partner in a federal Strengthening Community Colleges workforce grant through U.S. Department of Labor, Employment and Training Administration. ACC received the U.S. Department of Labor’s Recognition of Excellence award for the best community college training program in the nation in 2007.

ACC currently administers the following state workforce training grants: MiLEAP; Michigan New Jobs Training grants; and a MIOSHA CET grant.

Alpena Early College in collaboration with Alpena Public Schools is now in its 9th year. The most recent class of 56 graduated in May 2022 having attained an average of 51.27 college credits. Average Grade Point Average of these graduates was 3.1. Fifty-eight new students enrolled in Alpena Early College in fall 2022. Total Fall 2021 enrollment in the Alpena Early College program is 171 students.

ACC has boosted enrollment in dual enrollment and Early College programs by offering discounted in-district tuition to all K-12 districts enrolling students in our classes. As a result, ACC now offers dual enrollment postsecondary transfer courses to 22 K-12s across NE Lower Michigan and has established approved Early College partnerships with seven K-12s in the service district. ACC also offers direct credit to approximately 600 Career and Technical Education (CTE) students annually.

ACC is fortunate to provide a classroom and office on campus for a very robust Association of Lifelong Learners boasting 250 members of all ages and over 200 presentations, excursions, and social events per year.

As for university partnerships, ACC participates in the new Michigan Transfer Agreement, administers numerous other articulation agreements, and performs reverse transfer functions for students who leave us before graduating to begin university study. In addition, ACC’s Madeline Briggs University Center brings bachelor’s degree programs in business from Northwood University, integrative studies and information technology from Ferris State University, and online
nursing from University of Michigan – Flint so local residents have access without relocation or long road trips.

c. Other Initiatives Affecting Facilities Usage

• Capital improvements including the $8.7 million Center for Health Sciences Van Lare Hall renovation project, completed in 2021. This project replaced the original HVAC and electrical wiring system of a legacy building constructed in 1957. All windows were replaced, the building was abated for asbestos, sprinkled for fire suppression, and air conditioning and a new roof were installed. Technology upgrades included simulation manikins and a virtual cadaver Anatomage table for the Nursing program. Videoconferencing technology was installed in multiple classrooms with enhanced WiFi and internet connectivity for students throughout the building.

• A $3 million Center for Manufacturing Excellence renovation of the welding and manufacturing labs is scheduled to begin in fall 2022. This project will upgrade the classroom and lab space for two robust occupational programs with outstanding job opportunities for graduates.

• Successfully introduced LPN and RN nursing programs to the Oscoda Campus, which entailed developing a nursing instructional laboratory and new clinical partnerships with area hospitals in Tawas and West Branch.

d. Economic Development Impact

In general terms, ACC’s economic impact is documented by a study performed in 2006 by CCBenefits, Inc. The Fact Sheet is attached at the end of this report in the Source Material section. This document demonstrates that within the five-county college service area, the regional economy is $88.1 million stronger per year as a result of past and present college operations.

b. Enrollment projections

Fall 2022 headcount increased 1.75% to 1,512 students while credit hours rose 1.7% to 12,959. ACC was one of only 4 Michigan community colleges to finish up in enrollment for fall semester 2022. Enrollment continues to be a significant challenge, due primarily to an ongoing demographic of fewer high school graduates per year in every K-12 in NE Michigan coupled with uncertainties associated with the COVID-19 pandemic. ACC’s occupational programs continue to sustain robust enrollment levels and its dual enrollment and Early College partnerships now represent half of headcount enrollment. Traditional General Education transfer courses appear to be the enrollment sector that is most challenged currently. Futures for Frontliners and Reconnect have helped enrollment, though it is a concern to College officials and program participants alike that a sustaining funding model to keep these programs viable has yet to be passed by the legislature. ACC’s migration to remote videoconferencing instruction, piloted to good success prior to the pandemic, continues to extend the footprint of the College beyond its traditional boundaries. College officials continue to see evolution of remote learning modalities such as videoconferencing as critical to sustaining enrollment in the years ahead.

Over the next five years at least, ACC will be dealing with demographic factors that will cause continued enrollment challenges. Population in Alpena County, the largest source of ACC students, is likely to remain stable with an increasing senior citizen component and a decreasing youth component. Neighboring counties served by ACC all experienced significant population declines over the past 10 years, particularly among school age young people. To address the local demographics, the college continues to follow an annually updated marketing plan, available at https://discover.alpenacc.edu/document_center/About%20ACC/Office%20Public %20Information/acc_marketing_plan.pdf. The plan calls for continuing proven strategies and also initiating new emphases on technical program recruitment all over the state.

The concern about enrollment decline is based on the following graduation data from Alpena High School. About 65% of Alpena High School graduates attend ACC within two years of receiving their high school diploma.

Introduction

Process Background

SHW Group, in conjunction with the Alpena Community College Facilities staff, performed an update to the facility condition assessment of all campus buildings in May 2008.

As part of the study, SHW Group staff interviewed campus personnel and performed a walk-through of each building. Existing conditions, maintenance history, potential problems, and projected life expectancy of systems and components (including structural, mechanical, and electrical systems) were recorded.

Collected information was analyzed to develop estimates of repair and replacement costs in a database format for record-keeping, long-range planning, prioritizing and cost projection.

This report contains the printed version of that database.
**Condition Reports**

Highlights of this data are presented in this section to provide an overview of the condition of the entire College, each facility, and major campus systems. Recommendations for funding, both immediate and long term are provided.

Individual building reports include additional detail and representative photographs of each facility.

**Database Report Pages**

The underlying data used to develop this report and the budgeting recommendations are included in the appendix. This is the raw data for use and regular updating by facilities staff. This information is also useful as a permanent record of conditions often retained in multiple locations, and as an “owner’s manual” for new employees.

**Purpose of the Study**

This Facilities Assessment and Deferred Maintenance Capital Planning Study, developed through a combination of personnel interviews, facility walk-throughs and building system analysis, was performed to accomplish the following objectives:

- Provide an inventory of the College’s facilities in a database format to be easily updated and maintained by college personnel and allow for quick access to facilities information.
- Determine the general condition of the buildings and grounds of the college and provide the data in a concise format, allowing quick determination of the current replacement value and condition of each facility.
- Determine a Facilities Condition Index (FCI) for each building and the college as a whole. The FCI is a benchmark index that rates the condition of existing college buildings and is used by facilities managers to quantify and prioritize deferred maintenance projects for capital planning purposes.
- Assist the college in meeting the goals of its Mission Statement through timely maintenance of the physical backbone of the college – the campus buildings.
Glossary

Vital Statistics

Basic building information—building use types (classroom, library, administration), year built, building area in square feet, and number of floors.

Observation Highlights

A partial list of field observations, highlighting major repair/replacement items and recently completed work. For a more complete list of field observations, see the individual building data sheets in the appendix.

Current Replacement Value (CRV)

The CRV is the cost to construct a typical replacement building in today’s dollars. The figure is based on the square footage of the current structure and the estimated current construction cost for that type of structure. Since some buildings are conglomerations of different uses (i.e.: classroom, library, administration) the CRV is based on estimated proportions of use types in each building. By the nature of the calculations and square foot construction costs, the current replacement value has a ±20% margin of error and will increase annually due to inflation.

Priority Issues/One Year Deferred Maintenance Backlog (1YR DMB)

The value of projects that have been deferred and require completion in order to safely maintain facilities and related infrastructure for their current use. The 1 Year DMB amounts shown are for items requiring immediate attention to fix critical problems. A long-term investment strategy should also include items that require repair or replacement within 5 years, thus avoiding the increased repair costs resulting from deferred repairs (i.e. leaky roof damaging interior finishes).

Facilities Condition Index (FCI)

Simply put, the FCI is the current DMB divided by the CRV. The resulting number is compared against nationally accepted standards and used to determine the condition of the building, campus or college.

FCI < 5% = Good
FCI >= 5% and <= 10% = Fair
FCI > 10% = Poor

The Association of Higher Education Facilities Officers (APPA) recommends that the FCI for any given building should not exceed 5% for the building to be considered in “Good” condition. The rating of “Fair” indicates that the building requires some attention to bring it up to standard, with some problems areas potentially requiring immediate attention. The rating of “Poor” indicates that the building needs urgent attention to prevent the existing problems from affecting other building systems and compounding future repair costs.
The APPA FCI Ratings, indicating the general condition of the building, are shown here along with the corresponding “traffic signals” that give a quick visual indication of the FCI rating.

**Priority Issues/One Year DMB Excess**

This represents the amount the DMB exceeds the APPA benchmark of a building with a 5% FCI – essentially the dollar amount to be spent immediately to reduce the DMB to attain the APPA rating of “Good”. In situations where a building is in better than “Good” condition (FCI<5%), the one year DMB excess is shown as zero.

For example, if a building has a CRV of $1,000,000 and an FCI of 10%, the DMB would be $100,000. This would leave a DMB excess of $50,000 – the amount to be spent to reduce the FCI to within the APPA 5% benchmark.

**Zero-Five Year Cumulative Deferred Maintenance Backlog (5YR DMB)**

Similar to the One Year DMB, the Five Year DMB represents the total value of projects that will require attention within the next five years, including those that fall under the One Year DMB. This value is included to help determine the investment required over the next five years to repair and/or replace problem items before they become critical.

*The Zero-Five Year DMB is often more telling of a buildings’ condition than the One Year DMB, since the first year number focuses primarily on life safety, code compliance and collateral damage. Most maintenance issues are not so critical as to fall into this category but often become so within 5 years.*

Looking at the previous example, if the building condition survey indicated an additional $250,000 in repairs from years 1-5, then the 0-5 Year DMB would total $350,000 (including $100,000 from the first year).

**Zero-Five Year DMB Excess**

Similar to the One Year DMB Excess value, this amount represents the investment to bring the DMB in line with the APPA benchmark of 5% of the Current Replacement Value. In situations where a building is in better than “Good” condition – a bit more difficult over a five year span, the five year DMB excess is shown as zero.

*This number is a good starting point for determining budgets – it allows the college to see what to spend to bring buildings into the APPA “Good” range – with the understanding that complete elimination of the Deferred Maintenance Backlog is not a likely scenario.*
DMB Equilibrium (Annual cost to maintain current DMB)

This is the dollar amount to be invested annually to keep the FCI (and DMB) from deteriorating – regardless of the current condition of the building.

Reusing the previous example, the amount required to maintain the FCI at current levels would be $20,000 annually (2% of $1,000,000).

The number is based on a nationally accepted rule of 2% of the CRV and assumes that building components have a 50-year renewal cycle and depreciate along a straight line. The assumptions were made to simplify calculations; in reality, building components DO NOT expire according to straight-line depreciation, and most components will require replacement within 30-40 years (excluding structure and foundation).

To restate – this annual investment will only maintain the existing FCI and do little or nothing to reduce any existing backlog.

CRV: ............................................$10,000,000
One Year FCI: .........................1.0%
Five Year FCI: ........................6.0%
One Year DMB: .......................$100,000
Five Year DMB: ......................$600,000
One Year DMB Excess: ............$0 over APPA 5% benchmark
Five Year DMB Excess: ............$100,000 over APPA 5% benchmark
Maintain DMB: .........................$200,000 annual cost to maintain current DMB
Above: A generic example of how the aforementioned data appears in this report

Building Use Types

The table below shows building use types and their respective current construction costs per square foot used to develop this database. As some of these use types are not found on all campuses, not all use types are used in the database. These costs, based on regionally weighted, preliminary construction cost data provided by contractors, historical cost databases and data from RS Means and Marshall and Swift, are for typical college and university buildings.
<table>

**Building Components**

The table below shows the building components used in the report. These are the basic components having a major influence on the replacement value of a building. The buildings were evaluated during walkthroughs with the facility personnel to determine how much of each component made up the CRV. It was then determined what percentage of each component required repair or replacement within one year, five years, ten years, and beyond. This data is used to determine the investment required to reduce the current and future deferred maintenance backlog.

Deferred Maintenance Backlog

A Brief Background

The problem of deferred maintenance at colleges and universities has been studied and better understood over the last decade. From an article by Dan Hounsell, in the magazine *Maintenance Solutions*, discussing how universities are addressing the issue of deferred maintenance:

“*Maintenance management professionals, who once seemed to be one of the few parties giving serious thought to the issue, now have been joined in the debate by growing numbers of sympathetic voters and far-sighted facility decision makers.*”

The Association of Higher Education Facilities Officers (APPA) concluded in a 1995 report titled “A Foundation to Uphold: A Preliminary Report” that the national backlog of deferred maintenance at colleges and universities exceeds $26 billion, up 27 percent from estimates made in a similar report from 1988.

$5.7 billion of that $26 billion backlog is classified as “urgent deferred maintenance” – projects that require immediate attention and that will cost far more if they are not completed within a year. Although spending this sum will eliminate current urgent needs, in only a few years there will be a new roster of items to replace them – if future budget planning is not undertaken. According to the APPA report, the current backlog “represents a threat to the capability of higher education facilities to support college and university missions.”

Other conclusions from the report include:

- More than 50 percent of all college types reported that deferred maintenance increased or stayed the same since 1988; only 25 percent reported decreases.

- 20 percent of the colleges in the study accounted for nearly 60 percent of the accumulated deferred maintenance.

- Public colleges typically have a greater deferred maintenance backlog than private universities, with 78 percent of the public research universities reporting an increase in deferred maintenance backlogs.

- By assuming that infrastructure deferred maintenance – site repairs, road and parking lot maintenance, exterior lighting, etc. – was not included in the figures provided by the campuses in the study, the estimated cost to eliminate accumulated deferred maintenance increases to $32.5 billion – with urgent needs increasing to $7.1 billion.

- When senior school administrators made deferred maintenance a priority, the institution made progress in reducing its backlog.

The most important point to remember is that even if universities and colleges spend these amounts, this will only eliminate the existing deferred maintenance backlog. There needs to be a coordinated, funded plan put into place at colleges and universities to maintain the condition of the facilities once they have been repaired – or time will again take its toll.
College Information:

Alpena Community College (ACC), founded in 1952, consists of two campuses. The eight facilities included in this report total approximately 319,000 square feet with a total Current Replacement Value estimated at approximately $59.6 million, with the oldest building built in 1957. The immediate general condition of the ACC facilities is “Good”.

This result is somewhat improved by the construction of new facilities which offsets the negative effect older buildings can have on the overall facilities condition index.

The three buildings contributing most to the immediate and longer term FCI values are the Besser Technology Center (BTC), the University Center, and the Huron Shores Building on the Oscoda campus.

Though the life expectancy of many building materials and systems has been reached, solid construction and good maintenance practices have helped to keep those materials (i.e., original windows, doors and certain HVAC systems) in as good condition as can be expected. However, in specific cases, some older systems including roofs, windows, doors and HVAC components are beginning to reach time for replacement.

Several areas of concern noted in the original 2000 assessment, including HVAC, lighting and ADA upgrades have been resolved since. Areas in need of attention include: water infiltration through exterior single-wythe masonry walls in newer facilities; older window and entry doors and related hardware; aging HVAC equipment; and roofing.

The average immediate deferred maintenance backlog and FCI for Alpena Community College is below the national average of approximately 7%, representing a manageable capital investment over the next several years. Most of the projected expenses at ACC fall into the category of aging systems.

This data, when compared to the accepted APPA benchmark, shows that Alpena Community College, when all buildings are viewed together, is currently in good condition. The next section of this report breaks this data down into a building-by-building review to clarify where attention is needed.

Priority areas:

Certain areas were noted and observed to be in need of particular attention. While listed on the individual building sheets, some of the more important issues are listed below:

Roofing: While roofing was replaced at the BTC, ponding water on the roof has occurred due to original, failed insulation. The Van Lare Hall and University Center roofs have reached their end of life and are due for replacement (These roofs have been replaced since the initial 2008 investigation).

Water Infiltration: The single-wall masonry construction at many of the newer buildings poses an ongoing maintenance cost and an immediate concern in several locations. One particular location of continued issues is at the Newport Center, especially in the arena, where penetrations
and lack of wall flashing appear to have contributed to leaks and collateral damage. The World Center for Concrete Technology is also experiencing ongoing problems with water entering through the exterior wall into the main lobby.

**HVAC**: Many HVAC system components, particularly the boilers at the BTC and the AHU’s at Huron Shores are at or past the end of the useful life (the boilers at BTC are undergoing replacement, reflected in this report). Good maintenance practices have kept major repairs at bay, but funds to replace boilers, original air handling units, unit ventilators, and pumps should be set aside in the near term.

**Windows and Doors**: Original windows, including sealant and hardware - especially those at the Natural Resources Center and University Center - are noticeably deteriorated and due for replacement.

Concrete roof deterioration at the Natural Resources Center – reroofing may have stopped progression of problem.

Original vinyl asbestos floor tile deterioration and adhesive failure at Van Lare Hall.
Concrete plank roof shifting at Besser Technology Center – connecting cables are suspect.

Concrete block between upper and lower windows allowing water infiltration – flashing is suspect.
Summary

The jump from the “Priority Issues FCI” of 1.8% to the long-term “0-5 Year FCI” of 9.0% is typical for many campuses with 40+ year-old buildings. If conditions are not addressed, the future situation will require increasing capital investments, even to maintain conditions in their current state.

This predicted potential FCI increase is mostly attributed to older campus facilities with systems nearing or past their typical life. For example, due to their size, age and cost, the Besser Technology Center and the Oscoda Campus contribute over half of the College’s predicted 5-year deferred maintenance expenses.

As stated in the Deferred Maintenance Backlog background, the investment solution has two facets:

- The funds needed for immediate repair projects – repairs and/or replacements that will prevent further deterioration of the buildings and infrastructure and help the college stay ahead of life-safety concerns.
- The funds required to maintain and/or improve the condition of the buildings. These funds need to be budgeted in advance to allow for repairs at the appropriate time, before items become critical or cause additional damage.

The following pages of this report break this data down into a building-by-building review to clarify where attention is most needed.

Recommendations:

Short Term Recommendations

The college should review the items that compromise the One Year Deferred Maintenance Backlog of approximately $1.1 million and address those affecting life/safety issue, those having the greatest potential for future damage to other building components, and those that are code compliance issues.

In addition to the first year issues that will carry over into the next five years, the college should also immediately begin budgeting for the projected $5.4 million in cumulative issues over the next five years and evaluate alternative solutions where the cost outweighs the benefit of repair.

Long Term Recommendation

The College should budget as much as possible of the industry recommended “2% of CRV” maintenance fund of $1.1 million annually for ongoing repairs to maintain the buildings once they are upgraded. While this benchmark is difficult for most institutions to attain, the goal of setting aside this amount annually is to ensure the buildings remain in stable condition and that funds are available in advance when systems reach the end of their lives.
Alpena Community College

CRV: .............................................$62,510,885
Priority Issues FCI: ......................3.6%
0-5 Year FCI: .............................12.6%
Priority Issues DMB: ....................$3,228,106
0-5 Year DMB: .............................$7,855,020
Priority Issues DMB Excess: .........$1,545,876 over APPA 5% benchmark
0-5 Year DMB Excess: ...............$5,054,020 over APPA 5% benchmark
Priority Issues Maintain DMB: ....$1,250,218 annual cost to maintain current DMB
Van Lare Hall

Facility: Van Lare Hall
Use Type(s): Classroom, Administration
Built: 1957
Area: 36,876 SF
Floors: 1 story

CRV: ............................................$6,859,680  
Priority Issues FCI: ......................11.0%  
0-5 Year FCI: ..................................26.1%  
Priority Issues DMB: ......................$1,433,673  
0-5 Year DMB: ..................................$1,786,947
Priority Issues DMB Excess: ......$1,090,689 over APPA 5% benchmark  
0-5 Year DMB Excess: ....................$1,443,963 over APPA 5% benchmark
Priority Issues Maintain DMB: ....$137,194 annual cost to maintain current DMB

One Year FCI = Poor
Five Year FCI = Poor

Observation Highlights:

• Building reroofed in 2008. (EPDM roof was at end of life, leaking and due for replacement)
• Surging of water levels in boilers periodically causes shut down due to low water.
• Unit ventilators in classrooms older, near end of expected lifespan.
• Poor ventilation, poor air circulation in offices.
• Several distribution panels at or near capacity.
• New 2x4 fluorescent fixtures in suspended ceilings installed in corridors in 2008.
• New suspended 2x4 lay-in in corridors, offices, 102 and computer labs.
• Exterior original full-lite aluminum frame doors at end of life. Original hardware failing and due for replacement
• Corridor and entry flooring removed and replaced (2009).
• VAT flooring in classrooms. Tile breaking apart and coming loose as adhesive fails.
Besser Technical Center

Facility: Besser Technology Center
Use Type(s): Votech, Classroom, Kitchen/Food Service
Built: 1962
Area: 73,799 SF
Floors: 2 stories

CRV: ............................................$15,092,750
Priority Issues FCI: ........................1.2%
0-5 Year FCI: ...11.4%
Priority Issues DMB: ....................$182,622
0-5 Year DMB: ............................$1,722,083
Priority Issues DMB Excess: ..............$0 over APPA 5% benchmark
0-5 Year DMB Excess: ...............$967,445 over APPA 5% benchmark
Priority Issues Maintain DMB: ....$301,855 annual cost to maintain current DMB

One Year FCI = Good
Five Year FCI = Poor

Observation Highlights:

• Deck planks sagging, cracked – never tested to address structural integrity issue. Parts of deck falling at soffit. Bottom of block broken away
• Roofing: Durolast area showing continued signs of ponding. Some minor leaks at roof drains at built-up roof area.
• Window glazing compound brittle and cracked at windows, especially in 1972 addition, may require re-caulking/replacement
• Block wall sealant at exterior control joints at end of life., due for replacement
• Boilers replaced – summer 2008 with (3) high efficiency, pulse type boilers at a cost of $103,000 for units and $36,000 to remove existing and install new. Savings of $30,000/year with improved efficiency gives a 4-1/2 year payback.)
• Horizontal unit vents functioning well but near end of life.
• HVAC Water pump bearing assembly failures becoming common with many replaced.
• Plumbing: Inadequate shut-off valves throughout building. Adding valves as repairs/modifications to the system are made.
• Power: Original underground 4160 V service, replaced in 2008 with 280/240v service.
• Casework: Science casework countertops in Physics lab at end of life, needs replacement or re-surfacing.
• Doors: (3) Machine shop and auto shop doors heavily rusted frames at end of life and due for replacement
• Floors: Some terrazzo deterioration at entries, due for re-grinding
• Site: Some cracking in concrete walks. Concrete at west entry heaved, chipped.
• Some washout at roof drain outlets

University Center

CRV: $592,480
Priority Issues FCI: 16.4%
0-5 Year FCI: 23.0%
Priority Issues DMB: $91,886
0-5 Year DMB: $128,584
Priority Issues DMB Excess: $67,543 over APPA 5% benchmark
0-5 Year DMB Excess: $106,350 over APPA 5% benchmark
Priority Issues Maintain DMB: $11,850 annual cost to maintain current DMB

One Year FCI = Poor
Five Year FCI = Poor
Observation Highlights:

- Durolast roof installed in 2008 (Built-up roof was at end of life, leaking and due for replacement)
- Extensive cracking in east block wall at garage
- Original single pane aluminum windows at end of life. Hopper windows with hardware in poor condition. Many units fastened shut.
- Heating controls poorly coordinated, temperature difficult to control
- Fire alarm original, not ADA compliant, not monitored.
- Exterior walks have settled at entry 3 +/-, trip hazard.

Natural Resources Center

Facility: Natural Resources Center  
Use Type(s): Classroom, Lab  
Built: 1972  
Area: 39,518 SF  
Floors: 4 stories

CRV: $9,642,880  
Priority Issues FCI: 9.0%  
0-5 Year FCI: 23.4%  
Priority Issues DMB: $869,788  
0-5 Year DMB: $2,253,541  
Priority Issues DMB Excess: $387,644 over APPA 5% benchmark  
0-5 Year DMB Excess: $1,771,397 over APPA 5% benchmark  
Priority Issues Maintain DMB: $192,858 annual cost to maintain current DMB

One Year FCI = Fair  
Five Year FCI = Poor
Observation Highlights:

- Settlement at first floor room 110, at building expansion joint. Floor and wall cracked and moved, appears to have stabilized. Engineer reports that no further movement anticipated.
- Hardware in poor condition. Window handle/locking mechanism don’t operate well – plastic parts wearing out and replacement part availability limited.
- West entry curtain wall - caulk deteriorating, aluminum frames pitted, system at end of life, due for replacement
- (5) Chemistry and Biology fume hoods replaced as part of 2006 renovations. Fume hoods not on constantly – corrosives cabinet vents into system, but not on unless fume hood is on. Verify with safety regulator to determine system operation requirements.
- No shut-off valves for HVAC system make maintenance very difficult.
- Valves added when possible as repairs are made.
- Pumps had high failure rate on bearing assemblies, replaced with new type that has resolved the problem.
- Shut-off valves are inadequate and are added as repairs are made.
- Some distribution panels at or near capacity. No reported problems.
- Walls on level one and two repainted summer 2009.
- Spalling/cracking of concrete waffle slab overhang and balcony floor at fourth floor boardroom, reinforcing exposed.

Newport Center

Facility: Newport Center
Use Type(s): Athletic, Votec, Classroom, Library, Auditorium, Administration
Built: 1996
Area: 67,134 SF
Floors: 1 story
CRV: ............................................ $13,008,375
Priority Issues FCI: ..................2.9%
0-5 Year FCI: .......................7.9%
Priority Issues DMB: .............$381,145
0-5 Year DMB: ....................$1,022,458
Priority Issues DMB Excess: ....$0 over APPA 5% benchmark
0-5 Year DMB Excess: ............$372,040 over APPA 5% benchmark
Priority Issues Maintain DMB: ....$260,168 annual cost to maintain current DMB

One Year FCI = Good
Five Year FCI = Fair

Observation Highlights:

• Settlement at classroom 111. Some initial settlement, no further movement since.
• Water infiltration at split faced, single width masonry walls
• Pressure bar attachment at transition from low roof to arena wall has no counter-flashing; just caulk bead along top edge. Caulk is cracked, potentially allowing water on wall or from cavity to run inside building at transition bar location.
• Extensive patching dating to original installation, particularly at seams.
• Patch adhesive showing signs of failure. Monitor condition and repair as necessary to prevent further deterioration.
• Glazing gasket on interior of windows popping out – pushed back in place on a regular basis.
• AHU #6 at the arena is not working due to relay failure, AHU #5 is handling the load alone
• Fire suppression riser leaking at valve M168, likely packing failure
• Hollow metal service doors of auto body shops and arena rusting at bottom
• Carpet in wellness center entry shrinking and pulling at seams, potential trip hazard.
World Center for Concrete Technology

Facility: World Center for Concrete Technology
Use Type(s): Votech, Classroom, Lab
Built: 2000
Area: 44,220 SF
Floors: 1 story

CRV: ............................................$9,065,100
Priority Issues FCI: ......................0.6%
0-5 Year FCI: ..............................2.9%
Priority Issues DMB: .................$55,297
0-5 Year DMB: ............................$225,721
Priority Issues DMB Excess: ......$0 over APPA 5% benchmark
0-5 Year DMB Excess: ................$0 over APPA 5% benchmark
Priority Issues Maintain DMB: ....$181,302 annual cost to maintain current DMB

One Year FCI = Good
Five Year FCI = Good

Observation Highlights:
• Water infiltration at main lobby, especially at main window wall, flashing may be inadequate and weeps may not be working.
• HVAC: Bearing assembly failures on Bell & Gossett pumps
• AHU #2 (heat only) for labs 105 & 107, unit is cutting out on power overload; cause is unknown
• Power: Voltage fluctuates – usually over. Investigating supply problem with Alpena Power
• Past frequent breaker tripping problem solved by redistributing loads on panels for certain areas
• Doors: Roll-up doors – NE plant door gearbox leaks oil, SE plant door has minor forklift damage. Manual overhead door between 107 & 109 damaged by forklift and will not close
• Heaving problems at concrete pavers in front drives repaired in 2006
• Salt deterioration on bollard light fixtures at front, most lights replaced
Fine Arts Center

Facility:     Fine Arts Center
Use Type(s):  Votech, Classroom
Built:        2007
Area:         14,090 SF
Floors:       1 story

CRV: ............................................$2,395,300
Priority Issues FCI: ......................0.0%
0-5 Year FCI: .........................1.0%
Priority Issues DMB: ......................$0
0-5 Year DMB: ............................$22,755
Priority Issues DMB Excess: ............$0 over APPA 5% benchmark
0-5 Year DMB Excess: ......................$0 over APPA 5% benchmark
Priority Issues Maintain DMB: ....$47,906 annual cost to maintain current DMB

One Year FCI = Good
Five Year FCI = Good

Observation Highlights:

• Building new, under warranty
• Building HVAC creates negative pressure problems and concerns about proper distribution and ventilation throughout labs.
• Revolving darkroom door – not ADA accessible (only door).
Oscoda Campus

Facility: Oscoda Campus Building
Use Type(s): Classroom, Administration
Built: 1977
Area: 31,140 SF
Floors: 3 stories

CRV: ............................................$5,854,320
Priority Issues FCI: ......................3.6%
0-5 Year FCI: .........................11.7%
Priority Issues DMB: .................$208,414
0-5 Year DMB: .........................$685,541
Priority Issues DMB Excess: ......$0 over APPA 5% benchmark
0-5 Year DMB Excess: ...............$392,825 over APPA 5% benchmark
Priority Issues Maintain DMB: ....$117,086 annual cost to maintain current DMB

One Year FCI = Good
Five Year FCI = Poor

Observation Highlights:

- Roof: Some roof leaks at edges of NE & NW corners. Downspout at boiler room door loose, pulling off building
- Windows: Original insulated glazed, sliding aluminum windows in good condition. Hardware in good condition, locks work well.
- Cladding: Evidence of brick damage and replacement at new stair/ elevator tower in SW corner. Brick still appears to be problematic in these areas.
- HVAC: Most components are original, near or past end of life. Above-ceiling AHU's are very noisy; several only operate when lights are on - very poor air quality. (2) intake louvers at lower level are covered, should be uncovered for better indoor air quality.
- Excessive humidity problems evident from sagging ceiling tile.
- Server closet on second floor overheats.
• Drinking fountains don’t have adequate water flow
• Power: Panels are not labeled well. No GFI outlets in science lab
• Lighting: Stairway lighting on switches, lighting level low
• Ceilings: Sagging tiles on all floors, especially the 1st floor. Grid is stained and rusty, due for re-paint. Grid damaged in computer lab. 5+% of ceiling tile is stained or damaged by water.
• Doors: Closer at main entry needs repair. Original hardware at end of life, due for replacement. North door sticks & doesn’t close tight. West lower level hollow metal door rusting at bottom, delaminating, doesn’t close, due for replacement
• Interior doors: Finish scratched and veneer damage, most doors have holes where parts were removed
• Carpet replaced throughout first and second floor with the exception of a few offices
• Emergency and Exit lighting - Several not working.
• Treads in poor condition on some stairs, especially front entry stair
• Front entry steps nosings missing or loose.
Deferred Maintenance Detail Report - by Building

| HVAC     | 19| $2,867,623 | 0          | 10      | 25       | 65      | Generation (2) 1962 hot water boilers – low efficiency (60%), gas fired, ground mounted, cycled for complete redundancy. Boilers provide hot water for reheat coils at BTC and CTR. Cooling provided by (4) DX rooftop AHU’s for computer/CAD labs (2007), bookstore (1998) and president’s office area (1998). Some window AC units elsewhere for individual rooms. Water service is treated. Distribution Horizontal unit vents in classrooms, corridors and some offices. (7) new vertical units with rooftop compressors provided in 2007 computer lab renovation Auto lab: Co-Ray-Vac radiant heating (1993). Welding lab: Gas fired RTU connected to exhaust fan system Machine shop: 3-zone AHU, original Controls Primarily pneumatic controls on original equipment. Air compressor motor replaced previously. DDC controls on new rooftop equipment. Welding lab fume venting system works well (1988 +/-) Auto lab exhaust system works well (1998 +/-) Toilet exhaust system tied to lighting. 2000 assessment: No air conditioning. Original hot water/boiler - OK. Need more outside ventilation. Primarily univents, some air handlers. Piping problem in boiler room should be addressed within the year. $20,000-$25,000 to fix. Transformer in boiler room - leak sprayed into transformer - situation not considered safe. 2008 assessment: ***(2) plugged tubes on boiler #1, (1) failed fire tube – repairs on hold. No way to determine condition of boilers besides the tubes. ***Horizontal unit vents in classrooms functioning well but near end of life. ***Pump bearing assembly failures becoming common with many replaced. Considering replacement with (3) high efficiency, pulse type boilers at a cost of $103,000 for units and $36,000 to remove existing and install new. Savings of $30,000/year with improved efficiency gives a 4-1/2 year payback. Cooling DX rooftop AHU’s - no reported problems. No coil leaks reported. Auto lab: Co-Ray-Vac radiant heating functioning well. Pneumatic controls in good working condition Welding lab fume venting system works well. Auto lab exhaust system works well.

| HVAC     | 25 | $1,463,580 | 0         | 5       | 45       | 50      | Generation  
(1) Hot water boiler, (3) Circulating pumps  
Complicated system, difficult to maintain.  
Distribution  
Building divided into 3 vertical zones.  
AHU's are on each floor, several above ceiling with outside fresh air intake. Perimeter fin tube in all rooms  
RTU serves third floor  
Window mounted AC units in various locations  
Second floor NW classroom has split system providing heating and cooling  
Controls  
Pneumatic controls  
2000 assessment:  
Not air conditioned – some window air units. Hot water boiler 3 years old.  
HVAC distribution needs to be redone. Zoning problems. Ventilation units installed to meet code need to be redone.  
2008 assessment:  
***Most components are original, near or past end of life.  
***Above-ceiling AHU's are very noisy, several only operate when lights are on - very poor air quality.  
***(2) intake louvers at lower level are covered, should be uncovered for better indoor air quality.  
***Excessive humidity problems evident from sagging ceiling tile  
***Server closet on second floor overheats  
***Fume hood in science lab is older model with asbestos back panel, may not have backflow preventer on water supply.  
Operation is not continuous to ensure fumes do not build up in hood when room not in use. |

V. Implementation Plan

a. First priority: repurposing the Charles Donnelly Natural Resources Center in order to (1) create a Center for Life Sciences and STEM Innovation; (2) replace or upgrade central building functions such as HVAC, a new roof, upgrade obsolete interior instructional spaces with modern technology; (3) refurbish interior and exterior surfaces; and (4) create open engaging spaces for student learning and collaboration. A more detailed cost breakdown is the subject of an Attachment B document at the end of this plan.

b. Addressing ACC’s deferred maintenance campus-wide would entail a set of projects estimated to represent a total of $7,855,000 in expenditures.

c. The State Building Authority participated in financing for construction of the ACC Electrical Power Technology Center, which was completed in January 2015.

d. Distance learning methodologies, particularly videoconferencing systems, are relevant for nursing and nearly every other occupational and General Ed transfer program offered by ACC. Maintenance projects associated with the buildings referenced in Part IV, Facilities Assessment, will require expenditures in excess of $1,000,000.

VI. Source Material: Economic Contribution Study

Fact Sheet: The Economic Contribution of Alpena Community College (CCBenefits 2006)

What role does Alpena Community College (ACC) play in the local economy? The results of this study demonstrate that ACC is a sound investment from multiple perspectives. Students benefit from improved lifestyles and increased earnings. Taxpayers benefit from an enlarged economy and lower social costs. And the community as a whole benefits from increased job and investment opportunities, higher business revenues, greater availability of public funds, and an eased tax burden.

ACC stimulates the state and local economy

• The ACC Service Area economy receives roughly $8.7 million in regional income annually due to ACC operations and capital spending.

• ACC activities encourage new business, assist existing business, and create long-term economic growth. The college enhances worker skills and provides customized training to local business and industry. It is estimated that the present-day ACC Service Area workforce embodies around 530,100 credit and non-credit hours of past and present ACC training.

• ACC skills embodied in the workforce of the ACC Service Area where the former students are employed increase regional income by $69.4 million. Associated indirect effects increase income by another $9.9 million.

• Altogether, the ACC Service Area economy annually receives roughly $88.1 million in income due to the past and present efforts of ACC. Clearly it is accurate to describe ACC as an engine of economic growth.

Alpena Community College Five-Year Capital Outlay Plan 2024-28, pg. 66
ACC leverages taxpayer dollars

- The state and local community will see avoided social costs amounting to $12 per year for every credit earned by ACC students, including savings associated with improved health, reduced crime, and fewer welfare and unemployment claims.
- This translates to $387,000 worth of social savings to the State of Michigan each year as long as students are in the workforce.
- Students benefit from higher earnings, thereby expanding the tax base and reducing the tax burden on state and local taxpayers. When aggregated together, ACC students generate about $3.5 million annually in higher earnings due to their ACC education.
- Students see their annual income increase by $111 per year for every credit completed at ACC.

ACC generates a return on government investment

- State and local government allocated around $7.8 million in support of ACC in fiscal year 2005.
- For every dollar appropriated by state and local government, taxpayers will see a cumulative return of $1.90 over the course of the students’ working career (in the form of higher tax receipts and avoided social costs).
- State and local government will see a rate of return of 8% on their support for ACC, which compares very favorably with private sector rates of return on similar long-term investments.

ACC increases students’ earning potential

- A total of 3,479 credit and non-credit students attended the college in academic year 2004-2005. As many as 75% of these students stay in the region initially after they leave the college and contribute to the local economy.
- Studies demonstrate that education increases lifetime earnings. The average annual earnings of a student with a one-year certificate are $25,963, or 84% more than someone without a high school diploma or GED, and 16% more than a student with a high school diploma. The average earnings of a student with an Associate Degree are $30,586, or 117% more than someone without a high school diploma or GED, and 37% more than a student with a high school diploma or GED.
- ACC students will see their annual income increase, on average, by about $111 per year for every credit completed at ACC during the analysis year.
- Throughout his or her working career, the average ACC student’s discounted lifetime earnings (i.e., future values expressed in present value terms) will increase $5.20 for every education dollar invested (in the form of tuition, fees, books, and foregone earnings from employment).
- Students enjoy an attractive 16% annual rate of return on their ACC educational investment, and recover all costs (including wages foregone while attending) in 9 years.
Attachment B

FISCAL YEAR 2023
PRIORITY CAPITAL OUTLAY PROJECT REQUEST

Institution Name: Alpena Community College

Project Title: Charles R. Donnelly Life Sciences and STEM Innovation Project

Project Focus:  

- X Academic
- ___ Research
- ___ Administrative/Support

Type of Project:  

- X Renovation
- ___ Addition
- _ New Construction

Program Focus of Occupants: Science classrooms,

Approximate Square Footage: 39,520 square feet repurposing existing space

Total Estimated Cost: $8.5 million

- Mechanical/Heating system replacement $2,080,000
- Roof $290,000
- Elevator $200,000
- Classroom/Lab technology $1,000,000
- Exterior improvements $2,760,000
- Interior renovations $1,360,000
- Professional fees/contingencies $810,000
- Total $8,500,000

Estimated Start/Completion Dates: October of 2023/August of 2025

Is the Five-Year Plan posted on the institution’s public internet site?  

- X Yes
- ___ No

Is the requested project the top priority in the Five-Year Capital Outlay Plan?  

- X Yes
- ___ No

Is the requested project focused on a single, stand-alone facility?  

- X Yes
- ___ No (part of an existing building)

Describe the project purpose.

Occupying 39,520 square feet, the Charles Donnelly Natural Resources Center (NRC) is a four-story contemporary block building that has served as the focal point for science education in Northeast Michigan for nearly 50 years. Built in 1972, it is the third oldest building on the main campus of Alpena Community College and maintains a central piece of ACC’s legacy, providing six natural science classrooms and laboratories on the first floor used for chemistry, biology, microbiology, and botany. Also on the first floor are a vending area, 130-seat lecture hall, and faculty offices. The second floor has general purpose classrooms, a conference room, and faculty offices. The third floor contains faculty offices and the fourth floor is the College Board room.
The Charles R. Donnelly Life Sciences and STEM Innovation Project proposes to repurpose NRC to: (1) upgrade outdated first floor Lecture Hall with modern videoconferencing technology to enhance distance and remote instruction; (2) develop a Life Sciences and Information Technology Innovation Center on the second floor, including technology to bring in external lecturers and create a student collaboration center; (3) update interior and exterior renovations, particularly at building entrances and 4th floor concrete facades; (4) replace HVAC and windows throughout the building to mitigate COVID hazard to students, staff, and the community; (5) replace roof over the entire building; and (6) develop and/or modify Life Sciences and related STEM certificate and associate degree programs to allow NRC to continue to be a hub for science education, STEM talent development, and regional prosperity in NE Michigan for decades to come.

**Describe the scope of the project.**

The following general infrastructure upgrades will be required at an estimated cost of $8.5 million:

- Replace existing steam boiler system with high-efficiency HVAC system (geo-thermal, forced air, or hot water)
- Upgrade first floor lecture hall with videoconferencing technology, new seats with charging stations, and ADA-compliant support services.
- Renovate second floor classrooms to create a Life Sciences and STEM Innovation Center.
- Replace original elevator serving all four floors.
- Redesign main entrance and outdoor courtyard to support student collaboration spaces.
- Renovate restrooms throughout the building.
- Install smart rooms and enhanced videoconferencing technology throughout the building.
- Upgrade first floor lecture hall, fourth floor Board room, and second story classrooms with interior and exterior enhancements.
- Replace windows with high efficiency upgrades.
- Update furniture, fixtures, flooring, and signage.
- Install a new roof over the entire building.

Please provide detailed, yet appropriately concise responses to the following questions that will enhance our understanding of the requested project:

1. **How does the project enhance Michigan’s job creation, talent enhancement and economic growth initiatives on a local, regional and/or statewide basis?**

Prosperity Region 3 real-time labor demand from September 2020 notes that the highest paying occupations in Region 3 are also the ones that require the most education and training. The highest paying job titles are concentrated in the Healthcare practitioner and technical occupations and in Management occupations. The Charles R. Donnelly Life

*Alpena Community College Five-Year Capital Outlay Plan 2024-28, pg. 69*
Sciences and STEM Innovation Center directly targets job creation and talent enhancement in this growth area.

2. **How does the project enhance the core academic and/or research mission of the institution?**

The mission of Alpena Community College is to create a culture of educational excellence and service to the community.

The College goals are:

1. **Campus/Culture:** Offer a welcoming, safe, and adaptable culture that inspires diversity.

2. **Learning/Education:** Motivate continuous exploration of diverse opportunities and knowledge acquisition through a flexible learning environment.

3. **Community:** Stimulate community collaboration, which fosters comprehensive economic, cultural, and community development.

4. **Value:** Exercise sustainable value that supports career pathways and fiscal responsibility.

The Charles R. Donnelly Life Sciences and STEM Innovation Center aligns with the College mission and goals. The project enhances the core teaching and learning mission of Alpena Community College.

3. **How does the project support investment in or adaptive re-purposing of existing facilities and infrastructure?**

The project supports adaptive re-purposing of existing facilities and infrastructure by investing in a legacy building on the campus of ACC launching it into the 21st century as a regional leader in Life Sciences and STEM Innovation. Enhancing technology while preserving a historic building without adding new infrastructure on campus in a climate of demographic and enrollment challenges makes sense for ACC and the communities it serves. The potential rewards — higher return on investment, sustainable building, saving historic resources — make adaptive reuse a sensible development opportunity.

4. **Does the project address or mitigate any current health/safety deficiencies relative to existing facilities? If yes, please explain.**

The project mitigates five current health and safety deficiencies in the Charles R. Donnelly Natural Resources Center:

1) Total replacement of the HVAC system will provide years of additional life to the building and safety to students and staff who work in the facility, plus contribute to COVID-19 mitigation strategies by improving air circulation and overall building ventilation.
2) Replacing the windows will enhance building efficiency thereby reducing energy costs substantially and contribute to ACC’s institutional COVID-19 safety response.

3) Replacing the original elevator will support safety among all students, staff, and community stakeholders.

4) Remodeling bathrooms to provide modern ADA specifications will support easier access to students with disabilities.

5) Upgrading exterior entrances and balcony facades will enhance the visual appeal of the building and its functional safety.

5. **How does the institution measure utilization of its existing facilities, and how does it compare relative to established benchmarks for educational facilities? How does the project help to improve the utilization of existing space and infrastructure, or conversely how does current utilization support the need for additional space and infrastructure?**

   According to 2014 Michigan Community Colleges Activities Classification Structure data (Table 37), ACC is the second most efficient community college in the state in terms of cost per square foot. At $3.10 per square foot, ACC is 48 percent below the community college state aggregate of $5.97 cost per square foot.

   The Charles R. Donnelly Life Sciences and STEM Innovation Center will improve utilization of existing space by focusing resources on repurposing existing infrastructure to accommodate programs producing high-wage, high-demand jobs in which there are current and future projected labor market shortages.

6. **How does the institution intend to integrate sustainable design principles to enhance the efficiency and operations of the facility?**

   The institution intends to integrate sustainable design principles in the following three ways:

   1) Replacing an aging and inefficient boiler system with a modern energy efficient heating and climate control HVAC system.

   2) Installing energy efficient windows throughout the building.

   3) Updating lights, water, plumbing, bathroom fixtures, drinking fountains, and electrical switches.

7. **Are match resources currently available for the project? If yes, what is the source of the match resources? If no, identify the intended source and the estimated timeline for securing said resources?**
The following match resources are currently in place or may be accessed with reasonable certainty:

College support: $1,500,000  
Local Foundation support: $2,000,000  
Alumni (local and beyond Alpena): $750,000  
Total: $4,250,000

8. If authorized for construction, the state typically provides a maximum of 75% of the total cost for university projects and 50% of the total cost for community college projects. Does the institution intend to commit additional resources that would reduce the state share from the amounts indicated? If so, by what amount?

The College does not anticipate contributing additional resources that reduce the state share from the amounts referenced above.

9. Will the completed project increase operating costs to the institution? If yes, please provide an estimated cost (annually, and over a five-year period) and indicate whether the institution has identified available funds to support the additional cost.

It is not anticipated that the project will increase operating costs to the institution. On the contrary, a decrease in operating costs to the College is anticipated based on three main factors: (1) increased energy efficiency will lower operating costs; (2) reconfiguring existing classroom and laboratory space should allow for an expanded programming with no additional instructional costs; and (3) enhanced opportunities to provide distance learning or remote STEM instruction across NE Michigan should enhance revenue with no additional cost.

10. What impact, if any, will the project have on tuition costs?

No increase of tuition or fees is anticipated at this time based upon this project. Repurposing the Natural Resources Center should contribute to the College’s persistent efforts to restrain costs and thereby minimize passing along tuition increases to students.

11. If this project is not authorized, what are the impacts to the institution and its students?

If the project is not authorized, the following impacts to the institution and its students are projected: (1) Life Sciences and STEM programs essential to the prosperity of NE Michigan will fall further behind the technology innovation curve; (2) local students attending ACC for these occupations will become increasingly underprepared compared to peer graduates from more technologically-enhanced regions; (3) students will be incentivized to leave the region to pursue higher educational institutions where opportunity is more abundant, significantly challenging the regional goal of locally-driven prosperity; and (4) ACC’s role as the premier provider of post-secondary education in its NE Michigan service district will be compromised.
12. **What alternatives to this project were considered? Why is the requested project preferable to those alternatives?**

A 2014 Facilities assessment conducted by SHW Group estimated Current Replacement Value of the Charles R. Donnelly Natural Resources Center building at $9,642,880. This does not include the cost of demolishing the building, removing it, and repairing the site, estimated to cost an additional $1 million. Based on this assessment, three alternatives were considered. One, tear down the building and build a brand new structure. Two, tear down the Natural Resources Center and attempt to squeeze classroom and laboratory space into existing buildings on campus. Three, seek Capital Outlay funding to repurpose the building and upgrade it to current and future educational and training needs.

Based on the SHW assessment, repurposing the Charles R. Donnelly Natural Resources Center is considered preferable to these alternatives based on the following factors:

1) Currently there is not existing space suitable for these functions elsewhere on campus.

2) While the cost of repurposing existing buildings tend to be at a premium compared to new construction, replacing nearly 40,000 square feet of classroom and laboratory space with an equivalent amount of new construction was deemed to be cost-prohibitive.

3) The 2nd floor classroom and laboratory space vacated by the move of ACC’s nursing programs across campus, a key piece of ACC’s successful FY18 $8.7 million Capital Outlay plan, offers prime instructional space for the College’s expanding Life Sciences and STEM programming.

4) ACC’s most recent FY18 $8.7 million Capital Outlay project renovating Van Lare Hall to house ACC’s nursing programs proved the concept that repurposing legacy buildings works and offers the best solutions in regions where enrollment demographics remain challenging.
